Notice of Allowability Part of Paper

Part of Paper No./Mail Date 20050526

Application/Control Number: 09/873,063

Art Unit: 2176

REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The closest prior arts of record are Pringle et al. ("Pring1e"), U.S. Patent No. 6,470,306 and McQueen, U.S. Patent No. 6,674,904.

Pringle discloses a mechanism for translating an annotated source document in a first natural language to a target document in a second natural language having corresponding annotations. A source document is divided into first language tokens (also referred to as word tokens), annotation tokens that apply to the first language tokens, and ending tokens. Prior to translation, the annotation tokens are removed from the first token string. After the word tokens have been translated into second language tokens, the annotation tokens are inserted at appropriate locations in the second token string. Pringle specifically discloses that the word tokens include "individual punctuation marks; groups of letters that form words", and the annotation tokens include "groups of letters, characters or symbols that form annotations" (col. 11, lines 47-51). Hence, in Pringle, the first token string includes the same values as the source document, except that these values may be grouped to define tokens.

McQueen discloses an edge detection algorithm applying filters (i.e. median, high pass, threshold, minimum) using contour tracing and boundary detection for object identification in a digital image.

Application/Control Number: 09/873,063

Art Unit: 2176

However, the prior art of the record fails to explicitly teach, suggest, or render obvious converting a hypermedia document into a string containing a plurality of first values and a plurality of second values, with the plurality of first values replacing a plurality of formatting code segments within the hypermedia document and the plurality of second values replacing a plurality of text segments within the hypermedia document, as does the presently claimed invention. The prior art does not explicitly teach or suggest applying a low-pass filter to the string containing a plurality of first values and a plurality of second values, and determining the location of the main content within the hypermedia document using the output of the low-pass filter.

Conclusion

- 2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
- Any inquiry concerning this communication or earlier communications from the examiner should be directed to Paul Nguyen-Ba whose telephone number is (571) 272-4094.

 The examiner can normally be reached from 10:30 am 7:00 pm.

Application/Control Number: 09/873,063

Art Unit: 2176

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Feild can be reached on (571) 272-4090. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
